

HYDR**O**FORCE **HDD**

Clay/Shale Inhibitor

PRODUCT DESCRIPTION

HYDRO**FORCE HDD** is a proprietary blend of liquid clay stabilizers designed to stabilize water sensitive formations, and prevent hydration.

HYDRO**FORCE HDD** inhibits clays by means of suppressing the hydration and swelling associated with water absorption.

Clay inhibition is achieved by preventing water uptake and by providing superior cuttings integrity.

HYDRO**FORCE HDD** effectively reduces bit and BHA balling and aids in hole stability in addition to increasing effectiveness of solids control equipment.

PRODUCT ADVANTAGES

- Effective at concentrations as low as 0.25% by volume.
- Water soluble
- Will not flocculate the mud system.
- Environmentally friendly

PHYSICAL PROPERTIES

Appearance: Blue liquid

Density: 9.42 lb/gal

pH: 6.5-7.5

PACKAGING

HYDRO**FORCE HDD** is available in 5 gal bucket, 55 gal drums and 330-gallon totes
