

EnviroDRY 1.0

TECH DATA SHEET

PRODUCT DESCRIPTION: **ENVIRODRY 1.0** is a proprietary mineral based super absorbent polymer blend for use in solidification of aqueous slurries. The inorganic mineral base aids in capturing heavy metals while the super absorbent polymer efficiently takes up water turning the slurry in to a solid that passes a paint filter test for solid waste disposal.

The efficiency of **EnviroDRY 1.0** allows for low application rates eliminating bulking of material thus minimizing disposal costs. EnviroDRY 1.0 is well suited for solidification of water-based drilling fluids or potholing material.

APPLICATIONS AND USE: EnviroDRY 1.0 should be distributed evenly across the slurry to be treated. Mixing can be done by an excavator.

Addition rates will vary from .5% to 3% depending on the solid content of the slurry and desired set time.

PRODUCT ADVANTAGES:

- Will not bulk material
- Fast acting
- Accepted in landfills

PHYSICAL PROPERTIES:

| | |
|---------------|----------------|
| Appearance: | White granular |
| Bulk Density: | 0.7 |
| pH: | 7 - 9 |

PACKAGING: EnviroDRY 1.0 is available in 50 lbs. sacks, 45 per pallet
